Offre de doctorat (PhD) - 2 pages

UCLouvain

LIDAM ISBA

PhD Position in Machine Learning and Statistics
Differentiable Calibration Losses for Multi-Class Machine Learning Models

Research institute: ISBA (Institute of Statistics, Biostatistics and Actuarial Science) which is a part of Louvain Institute of Data Analytics and Modeling in Economics and Statistics (LIDAM).
Supervisor: Prof. Olivier Caelen.
Contract: Full-time doctoral fellowship, initially funded for 15 months through the UCLouvain FSR Projects scheme. The fellowship is intended to support the first stage of a longer PhD trajectory. Continuation beyond the initial funded period will depend on scientific progress, evaluation, external doctoral funding applications.
Start of contract: October 2026
Campus: Louvain-la-Neuve, Belgium
Scientific fields: Deep learning, statistics, trustworthy AI.

Proposed PhD topic:

We are seeking a motivated PhD candidate to work on a doctoral project at the intersection of machine learning, statistics, and reliable artificial intelligence.
Modern classification models, especially deep neural networks, often output probability scores. These scores are commonly interpreted as confidence levels. For example, if a model assigns a probability of 70% to a class, one would expect the prediction to be correct approximately 70% of the time. A model satisfying this property is said to be well-calibrated. In practice, high predictive accuracy does not guarantee good calibration. Many modern classifiers are accurate but overconfident or underconfident. This is problematic when probability scores are used to support decisions, risk assessment, medical prediction, fraud detection, ranking systems, or any setting where the reliability of the predicted probabilities matters.
The objective of this PhD project is to develop differentiable calibration losses for multi-class machine learning models. The goal is to move beyond post-hoc calibration methods and design calibration criteria that can be directly incorporated into the training of neural networks.
